

Artur Ismagilov

Unity Developer — also game design & 3D / VFX

Telegram @owlenchick LinkedIn linkedin.com/in/arturismagilov GitHub github.com/owlenchick

SUMMARY

Full-cycle Unity developer with 5+ years in game development. I've taken projects from prototype to Steam release: code, game design, 3D, VFX and publisher pitches. Strongest in C# gameplay systems, multiplayer (Netcode for GameObjects), performance and graphics optimization. Looking to commit to one big project with a strong team.

5+ years in gamedev

1 Steam game released solo

2 Steam games in development

12 mobile titles

EXPERIENCE

Technical Game Designer · Perelesoq

Feb 2026 — present

Indie studio · 26 people · Remote · Lenin Street Geek Shop

A technical role with a lot of code: I implement features in C# and integrate them into the studio's DI-based codebase, write shaders and VFX, set up lighting and levels, build UI and optimize graphics. R&D, polish and bug fixing across systems.

Game Designer · Octo Games

Jul 2025 — Nov 2025

AA studio on Steam · 150 people · Remote

Game design documents, reference research, close collaboration with designers, artists and engineers.

Why I left: the studio's adult-content focus wasn't the right fit for me.

Game Designer · Unity Developer · 3D · VA Gamedev

May 2022 — Jan 2025

Hyper-casual mobile startup · 12 people · Hybrid · 12 mobile titles

Led 10+ prototypes owning product, design, management and technical tasks. Core loops, scalable systems, economies tuned with AppMetrica; effects, shaders and UI/UX in Blender and Figma; playtesting and QA. Games were tested with publishers Freeplay and Moonee: average CPI ≈ $0.30, retention ≈ 27–30%.

The studio has since closed, so most of its games are no longer on Google Play.

OWN PROJECTS (IN PARALLEL WITH MAIN WORK)

Co-founder · Full-cycle developer · Bust The Wall

Nov 2025 — Jun 2026

Own projects with a friend · 2 people · in parallel with main work · Space Out Together · Sit or Die · Space Garbage

Prototypes for publishers in search of funding. Full cycle: C#, Unity, Netcode for GameObjects, Blender, SMM, pitch decks and publisher outreach.

Solo Developer · Meleiko

Feb 2023 — Jul 2025

Solo project · in parallel with main work · Aldo: Memory of the Kingdom

Built and released a full game on Steam alone: code, design, 3D, VFX, UI, marketing. Procedural islands with Wave Function Collapse, a tick-based update manager, binary saves with Steam Cloud.

DETAILS

LOCATION

Montevideo, Uruguay · UTC−3

WORK FORMAT

Remote only · full-time, part-time or contract · not relocating

LANGUAGES

Russian (native), English (C1), Spanish (A1)

EDUCATION

Bachelor · Information Systems & Technologies, KFU · 2018–2022

SELECTED PROJECTS

Space Out Together — Full-cycle developer · Steam · in development

- Networking on Netcode for GameObjects: online co-op for up to 6 players with proximity voice chat
- Destructible terrain on Marching Cubes: only player input goes over the network, every client rebuilds the mesh locally
- Laser mining and grappling-hook traversal

store.steampowered.com/app/4432580/Space_Out_Together

Aldo: Memory of the Kingdom — Solo developer · Released on Steam · Jul 2025

- Made the whole game alone over 2.5 years and shipped it on Steam
- Code, game design, 3D models and animation, VFX, UI, marketing
- Procedural islands with Wave Function Collapse (Tessera)
- One update manager with tick groups (frequent / rare) instead of per-object Update() — data-oriented approach

store.steampowered.com/app/3191740/Aldo_Memory_of_the_Kingdom

Lenin Street Geek Shop — Technical Game Designer · Steam · Demo out

- Implement features in C# and integrate them into the existing DI-based codebase
- R&D: explore, prototype and fully integrate new features into the game
- Gameplay logic and polish, bug fixing across systems

store.steampowered.com/app/3225880/Lenin_Street_Geek_Shop

Sit or Die — Full-cycle developer · Jam prototype · 21 days · open source

- Built in 21 days from scratch: gameplay code, design, 3D and presentation
- Full project source is public on GitHub

github.com/Owlenchick/Horovod

Mobile (VA Gamedev, 2021–2024): 12 hyper-casual & idle titles tested with publishers Freeplay and Moonee — average CPI ≈ $0.30, retention ≈ 27–30%.

SKILLS

Code

C#, HLSL, .NET / Mono, OOP · SOLID, DI · Zenject / Extenject, UniTask · async, LINQ, DOTween

Unity 6

URP · Render Pipeline, Shader Graph, Particle System · VFX, Addressables, NavMesh · Animator, UGUI / Canvas, Audio

Systems

Netcode for GameObjects, Marching Cubes, Wave Function Collapse, Binary saves + Steam Cloud, Steamworks

Performance

Update manager · tick groups, Data-oriented design, Batched / clustered updates, Post-processing, shadows, SSAO, CPU / GPU / RAM profiling

Art

Blender — models, animation, Figma — UI, texture atlases, Photoshop — textures, Lighting

Ship & Measure

Steam (Win / macOS / Linux), Google Play, App Store, Firebase, AppMetrica, Unity Analytics / Ads

Team

Git, Plastic SCM, Jira, Confluence, Google Workspace

Exploring

ECS / DOTS · Jobs · Burst — solo prototypes

ENGINEERING HIGHLIGHTS

- **Multiplayer for 6.** Online co-op on Netcode for GameObjects.
- **Performance by design.** In every project: fewer Update() calls, objects updated in clusters and batches, data-oriented layout.
- **Graphics optimization.** Effects, post-processing, shadows and SSAO tuned for the target frame rate.
- **Procedural worlds.** Aldo's islands are generated with Wave Function Collapse (Tessera), so every run gives a new map with treasure, gear and survivors to find.
- **Saves & Steam platform.** Binary save files synced through Steam Cloud, achievements via Steamworks, 11 languages.
- **Fast prototyping.** Sit or Die went from zero to a playable game in 21 days for the Polden Publishing jam.
